

### Keeping track of

# Customer 1 1 Checking out O Purchased

```
export function usePrevious(value) {
  const ref = useRef();
  useEffect(()) \Rightarrow \{
    ref.current = value;
  });
  return ref.current;
```

const previousData = usePrevious(data);

# Customer 1 1 Checking out O Purchased

# Customer 1 1 Checking out O Purchased

```
useEffect(()) \Rightarrow \{
  if (orders.count > prevOrders.count) {
    let increment = totalOrders.count - prevTotalOrders.count;
    increment = clamp(increment, 1, maxCirclesPerBucket);
    const newOrders = Array(increment)
      .fill({
        // "Checking out" bucket position:
        fromCx: xScale(1),
        // "Purchased" bucket position:
        toCx: xScale(2),
        // how big the radius should be based
        // on the increment size:
        radius: getRunningDotRadius(increment)
      });
    setNewOrders(newOrders);
}, [data]);
```

### Run dots,
